

## HOW TO MEASURE AND INSTALL YOUR MAJESTIC VENT COVERS

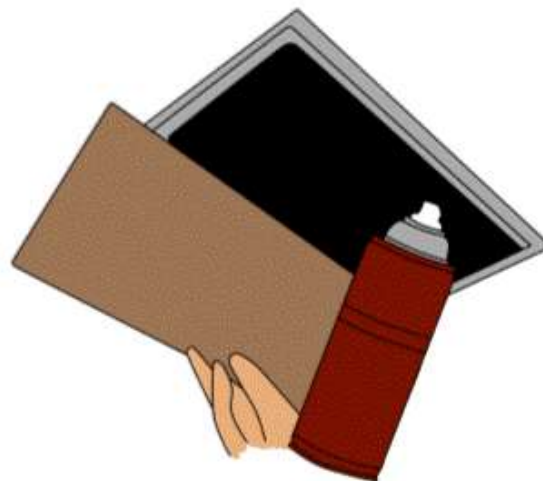

Clean around your existing grille to make it easier to remove after unscrewing. Old paint and caulking is quickly removed by running a box cutter around the grille.

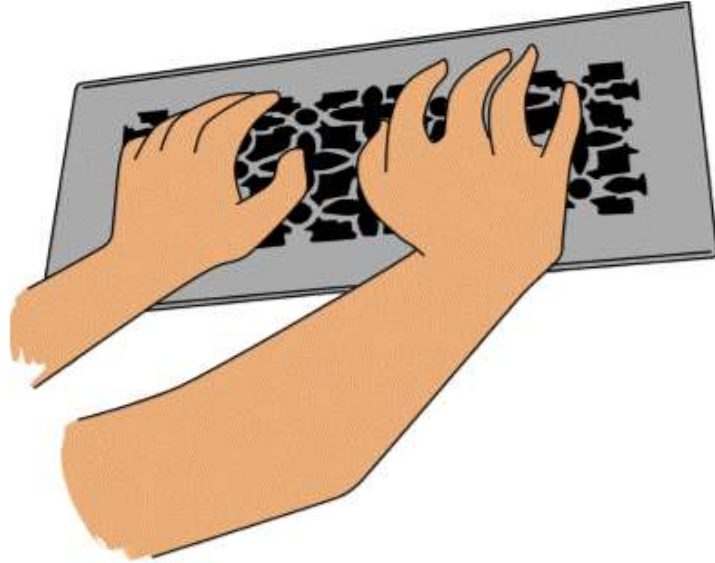

Unscrew and remove your old vent cover.

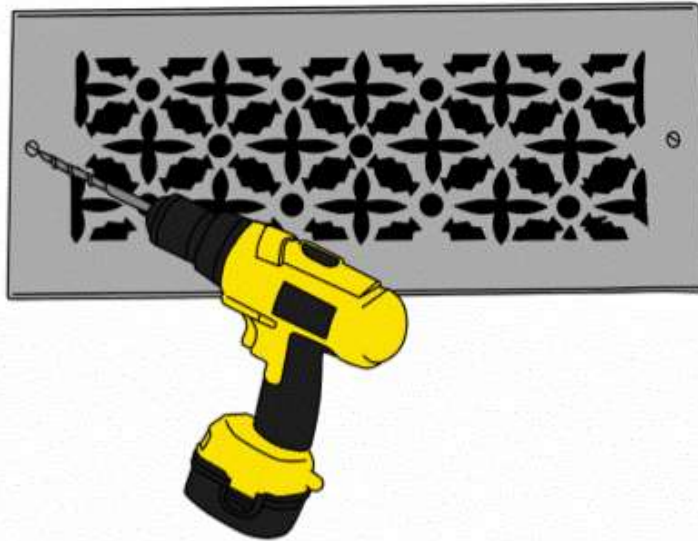

Measure your opening. Use width by height to determine the size of the grille you need, the overall size will be larger when you include the frame.

Though not necessary, we recommend using a black spray paint in your duct, otherwise you may be able to see the metal duct work.

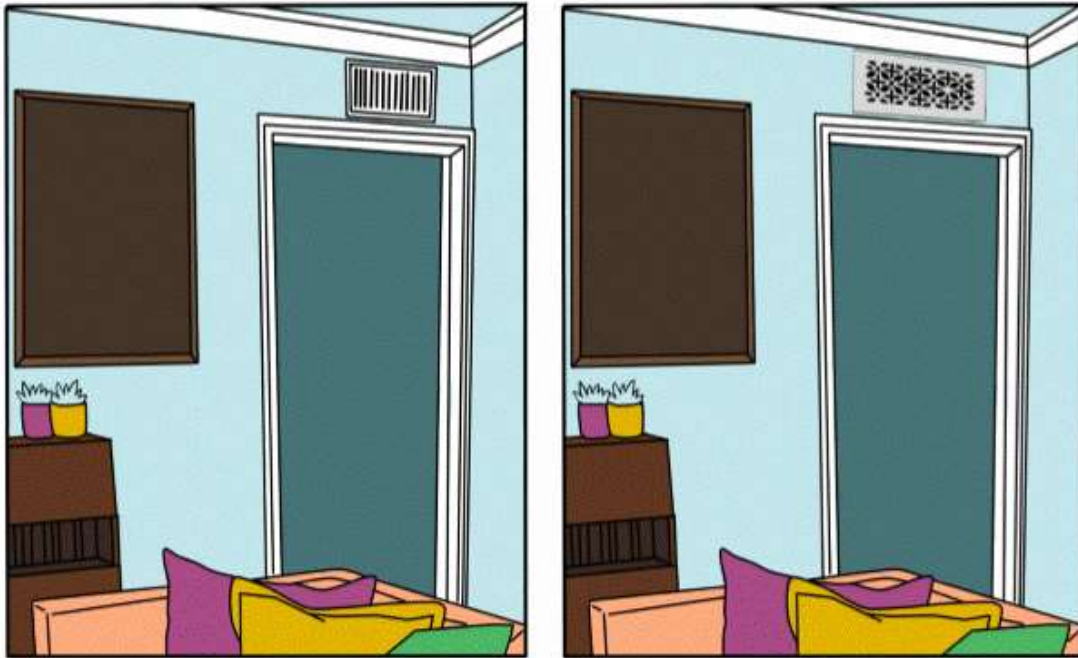

Before installing, make sure the lip of the grille (if your grille has one) fits inside of your opening and the framing fits flat with the wall or ceiling.

Screw your grille in using the provided screws. If you do not have pre-drilled screw holes, you may screw right through the grille or use a 23 gauge nail gun (this will provide a semi permanent application). If desired, use caulking around the grille to fill any gaps between the wall/ceiling .

**That's it!**

Should you need any assistance, call 888-797-3808 9-5 PST  
or email [sales@majesticventcovers.com](mailto:sales@majesticventcovers.com)

**Remember to order by your opening size, NOT your overall size!**

Warning: our products are not for floor use. For wall and ceiling only.

Our products are made specifically for central AC and heat use, any other use  
is not recommended or covered by warranty.
